EQuIS® External Data Submitter License

Extend Controlled EQuIS Access Across the Digital Data Lifecycle

Bring labs and other data submitters into upstream digital workflows, improve submission quality, and scale EQuIS participation with stronger governance at a lower cost.

Speed Submission. Strengthen Data. Lower Cost.

External Data Submitter Licenses give laboratories and other external data submitters a lower-cost, controlled way to participate in upstream digital workflows and direct Enterprise EQuIS Data Processor (EDP) submission.

Organizations can standardize submissions earlier, reduce manual Electronic Data Deliverable (EDD) handling, and move verified data into EQuIS as the downstream system of record.

The result is better data quality, stronger defensibility, less rework, and faster time to usability.

Key Benefits

- Embed labs early in your workflow.
- Enable data submitters to participate in key upstream processes such as eSRNs, eQuotes, and eCOCs, positioning EQuIS as the downstream system of record within an integrated digital data lifecycle.
- Lower the barrier to entry for data submitters.
- Provide a cost-effective option that lets laboratories and other submitters join the digital workflow without requiring a full-price license.
- Expand adoption of digital data submission.
- Encourage broader use of Enterprise EDP direct EDD submission to increase standardization and reduce reliance on manual EDD processing.
- Improve data quality and defensibility.
- Use direct submission through Enterprise EDP to enforce verification controls and deliver more consistent, compliant, and audit-ready data.
- Drive efficiency for clients and internal teams
- Reduce manual EDD handling, reformatting, and back-and-forth with laboratories to accelerate turnaround time from data receipt to usability.
- Support scalable program growth.
- Enable more data contributors to participate in the ecosystem without significantly increasing licensing costs, aligning with enterprise-wide data management strategies.

EQuIS® External Data Submitter License

Extend Controlled EQuIS Access Across the Digital Data Lifecycle

How It Works

1. Assign external access to laboratories and other third party contributors.
2. Enable participation in key upstream digital workflows such as eSRNs, eQuotes, eCOCs, and direct submission activities.
3. Route EDDs through direct Enterprise EDP submission, where verification controls improve consistency, compliance, and defensibility.
4. Load verified data into EQuIS as the downstream system of record for reporting, analysis, and decision-making.

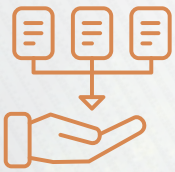

Ideal for

Teams digitizing upstream lab and submitter workflows while strengthening data defensibility

Organizations expanding Enterprise EDP direct submission while reducing manual EDD processing

Programs scaling high-volume, multi-site data contribution without broad full-license deployment

Business Impact

External Data Submitter Licenses help organizations bring more contributors into an integrated digital data lifecycle without significantly increasing licensing costs.

By expanding direct Enterprise EDP submission, reducing manual EDD processing, and improving verification at intake, teams can strengthen data quality and defensibility, accelerate turnaround time, and support enterprise-wide data management strategies at scale.
