EQuIS® Link

A powerful EQuIS Data Transformation Tool

EQuIS Link is an **advanced tool for migrating legacy or historical data** into EQuIS.

Use Link with large data sets or with multiple files from a common source. EQuIS Link can transform data **from a wide variety of input source files to standard EQuIS electronic data deliverables (EDDs)**.

Link Mapping project templates **can also be used as a "virtual" format to upload EDDs to EQuIS** via the Enterprise EDP EDD Upload widget.

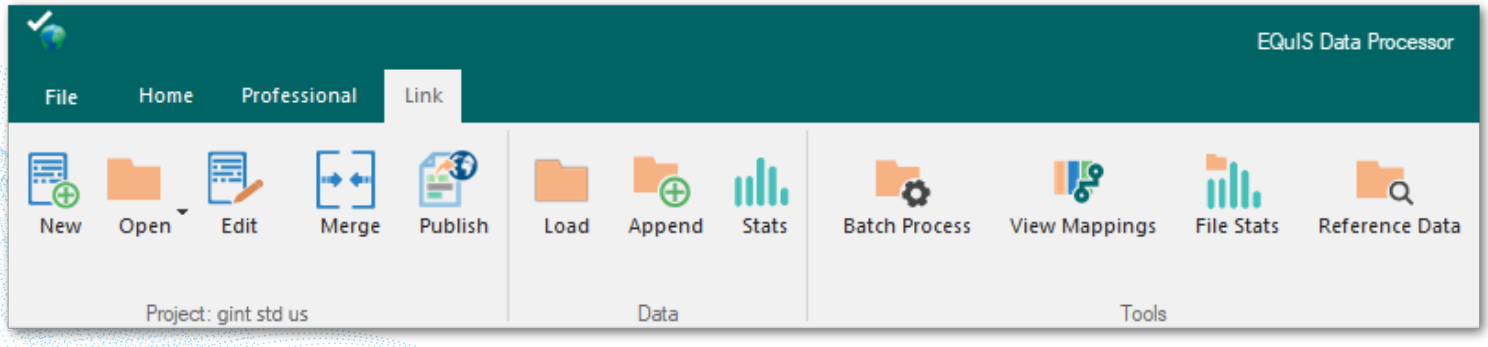

EQuIS Schemas

Supported Data Source Types

Microsoft Excel, Microsoft Access, CSV, TXT, XML, gINT, AGS4, CPT, DPT, TRX, CTF, DIS, DAT, Universal Data Link (UDL), and custom sources.

EQuIS Data Processor (EDP) Integration

EQuIS Link is available in EDP **with the EQuIS Professional Premier Data** license libraries. Check EDDs created with EQuIS Link directly in EDP and enforce EDD formatting and valid values, and then import EDDs into EQuIS.

EQuIS® Link

EQuIS Link Features and Benefits

- Build reusable data migration / transformation templates.
- Translate data from a variety of data sources to EQuIS EDD formats for high quality data migration.
- Create EQuIS EDDs by filtering data based on specified rules and conditions.
- Use batch processing to migrate many source data files with the same data structure.
- Construct and insert mathematical formulas using 100+ functions.
- Check EDDs directly in EDP.
- Use Link files as "virtual" formats to upload EDDs in Enterprise EDP.
- Generate field counts and data file values with statistical tools.
- Load external data sources as reference tables for specific data migrations.
