EQuIS® plan·engage®

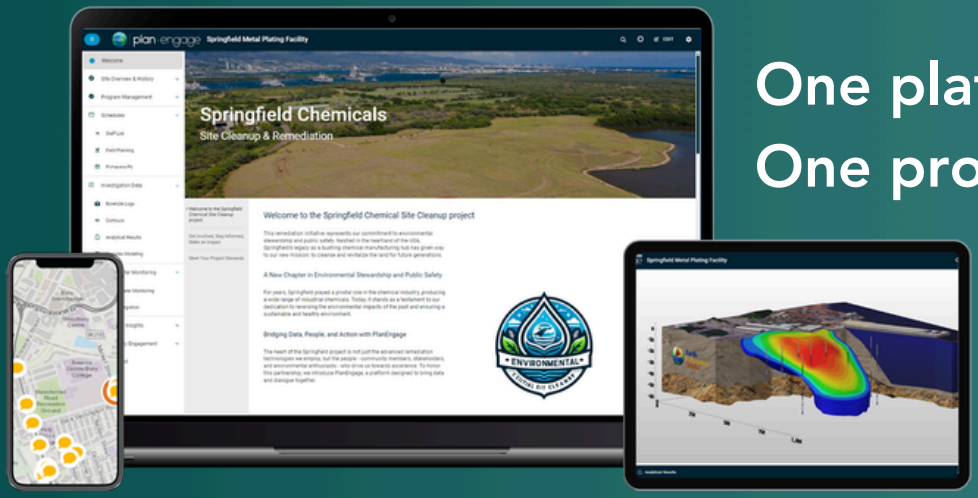

Connected data
Informed engagement
Better outcomes

EQuIS® PlanEngage® transforms complex environmental data and technical reports into interactive, visual, and easy to understand information. By making project information more accessible to technical teams, decision makers, regulators, and the wider community, PlanEngage improves engagement, and contributes to better environmental, social, and business outcomes.

EQuIS PlanEngage uses a data federation approach to securely connect trusted information sources across applications. Environmental monitoring data, GIS maps, documents, models, engineering information, imagery, dashboards, and other enterprise systems remain in their native locations while being presented through a single, unified interface. This provides stakeholders with access to current, authoritative information while reducing duplication, maintaining governance, and simplifying the management of complex projects.

Key Capabilities

- Integrate EQuIS data with enterprise systems to create unified views across environmental, financial, compliance, document management, and other project data.
- Add geographic context with embedded GIS and interactive mapping.
- Create a comprehensive view of project information so the data tells the complete story.
- Enable seamless stakeholder engagement through interactive dashboards, maps, reports, and visualizations.
- Secure and scalable, leveraging Microsoft Azure together with authentication, permissions, and security controls.

One platform.
One project story.

EQuIS®
plan·engage®

With powerful reporting capabilities, interactive maps, and immersive visualizations, EQuIS PlanEngage enables organizations to communicate technical information in a way that is meaningful for every audience.

Whether supporting project teams, executive leadership, regulators, community stakeholders, or the public, PlanEngage builds transparency, strengthens trust, accelerates informed decision making, and maximizes the value of your environmental and project data.

Benefits

- ✓ Turn complex data from specialized systems into meaningful stories that improve understanding and communication.
- ✓ Connect information from multiple systems without moving or duplicating data.
- ✓ Improve decision making with a complete, trusted view of your projects.
- ✓ Accelerate deployment with the EQuIS Integration Wizard, enabling fast and easy integrations.
- ✓ Build stakeholder and community confidence through transparent, timely, and accessible communications.

Tell the story. Own the workflow. Make better decisions.
